## The PhysioRED

The PhysioRED is a 21st Century high-tech wellness, anti-aging and rehab technology from Europe designed for weight loss, body shaping, physical therapy and cardio conditioning. This FDA listed technology offers clients a new and unique

workout using a recumbent bike with infrared technology that includes a DVD player and MP3 player to help motivate clients through their rehab/exercise routine.

The PhysioRED can burn calories up to 10 times faster than conventional workout programs without strenuous exercise. A 40 minute PhysioRED session can burn up to 2,400 calories. A

total of 2,800 watts of infrared light pen-

trate your skin deeply (up to 1.5 inches) expanding capillaries to stimulate blood circulation and elevating both the body's core temperature and heart rate. This in turn increases the body's metabolism and sweat glands which excrete toxins, fat and waste.

The PhysioRED also has billable codes for this therapy. The infrared provides FDA claims for the temporary relief of minor muscles and joint pain and stiffness, the temporary relief of joint pain associated with arthritis, temporary increase in local circulation, and relaxation of muscles. In addition the infrared lamps may also help muscle spasms, minor sprains and strains, and minor muscular back pain.

Sessions are booked at \$50-\$55 per session based on pre-paid package using a smart card that you slide in like a credit card. Just 5 sessions a day can generate over \$50,000 in annual revenue. Owners can also generate new patient referrals from personal trainers, weight management physicians and cardiologists.

## Offering Support For A Healthy Gut

The gut is home to different types of bacteria, many of which live in harmony with us. Maintaining a balance of helpful bacteria within the gut is important for the health of several body functions. To help provide a favorable environment for friendly microbes to thrive, Standard Process Inc.® introduces, Prebiotic Inulin.

Prebiotics are food (carbohydrates) that help maintain a healthy gastrointestinal environment by feeding the good bacteria of the gut. They promote the growth of native flora and other friendly intestinal microflora which strengthens the mucosal barrier of the gut.

Prebiotic Inulin provides an excellent source of fiber, combining inulin (from

chicory root), calcium, and magnesium. This unique combination encourages the absorption of these minerals, which are necessary to sustain healthy cells and bones. Prebiotic Inulin also supports immune function by maintaining a healthy gut.

Formulated by whole food supplement manufacturer Standard Process, Prebiotic Inulin can be used alone or added to any of the Standard Process powdered supplements to make a wholesome shake that provides additional fiber and minerals, and supports gut health.

For 80 years, Standard Process has provided health care professionals with high-quality, nutritional whole food supplements. Standard Process offers more than 300

products through three product lines: Standard Process whole food supplements, Standard Process Veterinary Formulas™, and MediHerb® herbal supplements. The products are available only through health care professionals.

Standard Process is involved in every step of production. The company grows crops on company-owned, organically certified farmland, utilizes state-of-the-art manufacturing processes, and employs the highest quality control standards. Standard Process strictly adheres to the Food and Drug Administration's good manufacturing practice requirements.
